

TABLE OF CONTENTS

ACKNOWLEDGEMENTS	iii
LIST OF TABLES	ix
LIST OF FIGURES	x
CHAPTER	
I INTRODUCTION	1
Motivations	3
Overview	4
II PRIOR WORK	6
Timbre	6
Sound Synthesis	11
Parameter Estimation	21
Meta-Synthesis	30
Searching for Synthesis Algorithms	38
Summary	53
III APPROACH	55
Defining the Synthesis Topology Representation	55
Audio-Implementation Systems	56
Languages and Iteroperability	57
Framing as a Genetic Programming Problem	60
Designing the Fitness Function	70
Timbre Feature Extraction	71
Timbre Similarity	89
Refining Search Using State-of-theArt Genetic Programming	117
Summary	125

continued

IV	EXPERIMENTAL DESIGN	127
	Timbre Similarity Testing	129
	Genetic Operator Variations	130
	Target Sound Selection	136
	Limiting Code Bloat and Promoting Parsimony	142
	Initial Conditions and Selection Methods	145
	Non-Standard Selection Methods	152
	Expanding/Restricting the Searchable Region of Input Space	156
	Generalization	157
V	RESULTS	162
	Finding an Optimal Similarity Measure for Time-Varying	
	Timbre	162
	Global Time Scaling	163
	Sample Deletion	164
	Extension of Stable Timbral Content	166
	Introduction of New Timbral Content	169
	Subsequence Reordering	170
	Repetition Insertion	172
	Looking Back at Our Results	173
	Optimizing the Fitness Surface by Varying Genetic Operator	
	Sets	174
	Problematic Outputs	174
	Results	176
	Investigating Methods for Reducing Code Bloat and Promoting	
	Parsimonious Solutions	185
	Testing the Effects of Various Initial Conditions and Selection	
	Mechanisms	189
	Initial Conditions and Standard Selection Mechanisms	189
	Non-Standard Selection Mechanisms	191
	Restricting/Expanding the Search Space	192
	Analyzing the Best-of-Run Patches and Their Outputs	194
	Feedback Delay	194
	Adaptive Downsampling	199
	Clipping Reverb	204
	Measuring Generalization Ability over an Optimized System	207
	Lion Roar	208
	Freight Train	211

continued

Metal Gong	215
Metallic Synth	218
Random Analog LFO Reverb Synth	220
VI CONCLUSION	224
Limitations	226
Future Work	227
BIBLIOGRAPHY	229
